01 Assessment Brief

Usman Sattar

Module Leader

- Usman Sattar
- u.sattar@derby.ac.uk
- MS 310, Monday – Thursday (10:00 am – 03:00 pm)

Key dates and details

Assessment Detail	Assessment Information
Assessment Type:	Individual Assignment
Assessment Weighting:	50%
Word count/Length:	1500 (The word count is just guidance so you can estimate the amount of work required. There is no penalty for more or less words.)
Learning Outcomes:	2. Design, implement and test a simple prototype application including a consideration of and application of cyber security.
Submission Method:	Turnitin
Submission Date:	12:00 Noon UK time, Thursday 25/03/2025 (Turnitin submission)
Provisional Feedback Release Date:	08/03/2025

Description of the assessment

Dixy Chicken Sunderland is a franchise of an established fast-food chain founded in 1986. With 110 outlets in the UK and over 150 worldwide, including locations in India, Brunei, Syria, Pakistan, Norway, and the UAE, Dixy is renowned for its variety and healthy options. Alongside its signature juicy, tender, and crispy coated chicken made with a unique blend of spices, the menu features subs, grilled chicken, fresh salads, desserts, and a range of side dishes.

Dixy Chicken Sunderland employs 8 full-time and 12 part-time staff members. Their objective is to deliver freshly prepared meals to customers' residences as quickly as possible, which requires orders to be received promptly. Approximately three years ago, they launched a website, demonstrating their commitment to adapting to modern methods. Their domain is *https://www.dixychickensunderland.co.uk/*. However, feedback from several clients has highlighted dissatisfaction with the website's homepage, the ordering process, and navigation.

Relationship to Programme Assessment Strategy

This assessment focuses on analysing and enhancing the front-end aspects of a website, aligning with the broader objectives of the module by integrating both theoretical and practical knowledge of web development. It builds a foundation for future assessments by identifying critical user interface issues, usability challenges, and security vulnerabilities, which are essential for creating robust and user-friendly solutions. The insights and recommendations from this report will inform the design phase in the next assessment, ensuring that the proposed solutions align with user requirements and industry standards. By addressing real-world issues such as user experience and cyber security, this assessment contributes to developing the technical and analytical skills necessary for evaluating and improving digital products throughout their lifecycle.

Attributes and Skills

	Skills	Links to useful resources
■	Critical thinking	Critical Thinking - Critical Thinking - LibGuides at University of Derby
■	Communication	Content / IT Product Design (derby.ac.uk)
■	Collaboration	Content / IT Product Design (derby.ac.uk)
■	Creative problem solving	Content / IT Product Design (derby.ac.uk)
■	Self-direction & planning	Content / IT Product Design (derby.ac.uk)
□	Numeracy, statistics & financial literacy	
■	Digital	Introduction to Digital Skills - Digital Skills - LibGuides at University of Derby
■	Resilience	Academic Wellbeing - Academic Wellbeing - LibGuides at University of Derby
■	Adaptability	Content / IT Product Design (derby.ac.uk)
■	Leadership & future thinking	Content / IT Product Design (derby.ac.uk)

Assessment Content

As a front-end web developer, your focus should be on the user-facing parts of the site. Front-end web developers typically use a combination of three programming languages: JavaScript, HTML, and CSS. HTML structures the content, while CSS defines typography, colors, and layouts. Finally, JavaScript controls the dynamic elements of the page, such as forms, animations, and pop-ups.

Task

You are required to review the current Dixy Chicken website and produce a study report of approximately 1,500 words. The report should focus on the following aspects and identify any issues or shortcomings of the website.

- Structure of the content.
- Typography, colours and layout
- Dynamic parts of the page, such as forms, animations, and pop-ups
- Front-end checks should be tested through use cases.
- Identify any cyber security issue on the website.

Provide your recommendations for improving all the aforementioned aspects to help Dixy Chicken address customer complaints and enhance their customer service. To improve the visual appeal of your report, include screenshots and utilize wireframes where appropriate.

Structure of the Report - Guidelines

Report should have following sections

1. **Introduction**
2. **Structure of the content**
3. **Typography, colors, and layout**
4. **Dynamic parts of the page, such as forms, animations, and pop-ups**

   Shopping cart, front-end checks should be tested, animations, and pop-ups.
5. **Robust script in relation to the cyber security environment.**

   Identify any cyber security issue on the website in terms of inputting data by the client at the website, protocol used and overall, for the payment security at selected website.
6. **Suggestions for enhancing all the aforementioned aspects.**

   Make wireframes for your suggestion's depiction.

Note: Include screenshots of the website where necessary to support your explanations.

Final Draft Review

- A mandatory individual face-to-face review of your final report will take place two weeks before submission. During this session, you will discuss your approach to the task with your lecturer. You will receive a mark reflecting the current status of your presentation, along with immediate oral feedback to help you improve it.

Final Submission

- Following the mandatory final review of the report, you will have two weeks to make improvements before submitting it to the designated Turnitin submission point and presenting it in class.

Assessment Rubric

CRITERIA	EXCELLENT (70 -100%)	VERY GOOD (60-69%)	GOOD (50-59%)	SATISFACTORY (40-49%)	UNSATISFACTORY (<40%)
Structure of content (15%)	Demonstrates an exceptional understanding of the structure of content.	Displays a comprehensive understanding of the structure of content.	Shows a solid understanding of the web application and the structure of content.	Demonstrates a basic understanding of the web application but lacks depth in certain areas.	Fails to convey a clear understanding of the chosen web application.
Typography, colours, and layout (15%)	Offers an insightful and detailed analysis of how typography, colours and layout including specific languages, and their impact on user experience and performance.	Provides a comprehensive evaluation of typography, colour, and layout implementation in the chosen web application.	Conducts a solid analysis of typography, colour, and layout though some details may be lacking.	Presents a basic analysis of typography, colour and layout in the web application but lacks depth and specificity.	Fails to provide a meaningful analysis of the typography, colour, and layout.
Dynamic parts and front-end checks should be tested through use cases. (30%)	Presents detailed and compelling use cases where scripting is integral to the chosen web application, with specific examples and impacts on user interactions.	Provides specific use cases demonstrating the importance of scripting, though some may lack depth or specificity.	Identifies use cases but lacks specificity or may not clearly articulate the impact of scripting in each case.	Offers basic use cases with limited detail or fails to clearly articulate their significance.	Does not provide meaningful use cases or examples related to scripting in the web application.

Robust script in relation to the cyber security environment. (15%)	Conducts an in-depth analysis of script in relation to the cyber security environment, identifying potential vulnerabilities and discussing implications for scripting.	Performs a thorough analysis of script in relation to the cyber security environment, highlighting potential threats related to scripting and discussing their significance.	Provides a solid analysis of script in relation to the cyber security environment, though some vulnerabilities or implications may be overlooked.	Conducts a basic analysis of script in relation to the cyber security environment, but lacks depth or specificity.	Fails to analyze script in relation to the cyber security environment and their implications for scripting in the web application.
Suggestions for enhancing all the aforementioned aspects. (15%)	Expectational suggestion that will cover all the lacking identified in above.	Proficient suggestion that will cover all the lacking identified in above.	Competent suggestion that will cover all the lacking identified in above.	Basic suggestion that will cover all the lacking identified in above.	Fail to give suggestions that will cover all the lacking identified in above.
Overall presentation (10%)	Demonstrates exceptional clarity and structure, with a well-organized document, clear introduction, body, and conclusion. Effective use of language and documentation.	Maintains a high level of clarity and structure, with a well-organized document, effective use of language, and a clear introduction, body, and conclusion.	Presents a clear and organized document, though some sections may lack clarity or cohesion.	Shows basic organization but may lack clarity in some sections.	Fails to maintain a clear and organized structure.

Anonymous Marking

Submissions in Turnitin and Blackboard

You must submit your work using your **student number** to identify yourself, not your name. You must not use your name in the text of the work at any point. When you submit your work in Turnitin you must submit your student number within the assignment document and in the *Submission title* field in Turnitin. Guidance is available showing how to do this.

Assessment Regulations

The University's regulations, policies and procedures for students define the framework within which teaching and assessment are conducted. Please make sure you are familiar with these regulations, policies and procedures.
